

reev Announces Strategic Partnership with A-Energy to Drive EV Charging Expansion in Belgium

Munich / Brussels, February 19th, 2025 — **reev**, the leading energy and charging platform for the semi-public sector, is excited to announce a new strategic partnership with **A-Energy**, a Belgian company specializing in comprehensive energy solutions for industrial buildings. This collaboration marks a significant milestone in advancing electric mobility infrastructure across Belgium.

A-Energy has signed a Professional Partner Framework Agreement with reev, solidifying a joint commitment to expanding EV charging infrastructure. "This partnership is a testament to our commitment to providing innovative and efficient EV charging solutions," said Jordi Steenman, Country Manager Benelux at reev. "A-Energy's expertise in energy solutions, combined with our technology, will accelerate the adoption of sustainable mobility solutions in Belgium." The partnership is focused on expanding EV charging infrastructure, with A-Energy having already sold its first project under this agreement.

As part of this collaboration, A-Energy has already received training on the reev platform, ensuring their team is well-equipped to efficiently operate and support EV charging infrastructure. This ensures that A-Energy customers will benefit from a streamlined and well-managed charging experience, backed by knowledgeable professionals who can assist with installation, maintenance, and optimization. Additionally, the partnership includes hardware from **PowerV**, a promising and reliable Belgian hardware manufacturer known for its high-quality and innovative EV charging solutions, ensuring flexible and future-proof installations.

A-Energy chose reev for its hardware-agnostic approach, robust energy management capabilities, and intuitive platform that integrates seamlessly with their ecosystem, including Charge Point Operators (CPOs) and installers. "reev's flexibility and forward-thinking approach make them the ideal partner for us," said Niels Fabry, CEO at A-Energy. "With their support, we can offer our clients high-quality, future-proof EV charging solutions that align with our broader energy management strategies." reev's reputation for innovation and customer-centric solutions

played a key role in securing this partnership.

About reev

reev is an internationally active software company based in Munich that offers a leading energy and charging platform for the semi-public sector. The company's mission is to promote sustainable and future-oriented mobility. The cloud-based solution ensures easy charging, efficient energy use and optimized load management – designed for companies, gastronomy, parking areas and the housing industry.

As a reliable partner for charge point operators (CPOs), electricians, wholesalers and charging station manufacturers, reev actively contributes to the expansion of the charging infrastructure. Intuitive solutions for administration, control and billing ensure maximum functionality, user-friendliness and security – for smart, connected and sustainable mobility.

About A-Energy

A-Energy is a Belgian company specializing in energy solutions for industrial buildings. As part of the A-Group—alongside AXOR and A-Roof—A-Energy provides expertise in solar panel installations, energy storage systems, and EV charging solutions. The company operates with a 100% B2B focus, serving high-profile clients such as Henkel.
