

## reev and SCE Sàrl partner to boost eMobility infrastructure across Luxembourg

**Luxembourg / Munich, 14 November 2024**

[reev](#), a leader in EV Charging Management Software (CPMS) with a focus on energy management innovation, has partnered with [SCE Sàrl](#), Luxembourg's trusted provider of integrated electric mobility solutions. With extensive experience in tailored consultation, installation, and long-term support for EV infrastructure, SCE Sàrl will join forces with reev to deliver efficient, scalable, and sustainable charging solutions across Luxembourg.

Through this partnership, SCE Sàrl will utilize reev's CPMS to offer a complete, energy-efficient EV charging experience, aligning with Luxembourg's ambitious sustainability goals. SCE Sàrl's expertise in infrastructure and customer-centric services will enhance reev's software capabilities, ensuring high performance and reliability for Luxembourg's rapidly expanding EV ecosystem.

"By partnering with SCE Sàrl, we're empowering Luxembourg's EV landscape with a robust, sustainable solution tailored to meet the evolving demands of users and companies alike," said **Jordi Steenman, Country Manager Benelux at reev**. "Together, we're paving the way for Luxembourg's electrified future."

"reev's CPMS fits seamlessly into our mission to deliver adaptable and sustainable eMobility solutions," added **Stephano D'Angelo, CEO at SCE Sàrl**. "This collaboration represents a significant step toward a greener future in Luxembourg, making EV charging more accessible and efficient for all."

This partnership underscores reev and SCE Sàrl's shared commitment to supporting Luxembourg's eMobility goals, delivering advanced, user-focused charging solutions for a sustainable tomorrow.

### About reev

Based in Munich, reev provides a simple, transparent, and fully automated cloud software platform for the management, control, and billing of charging infrastructure. This enables the company to

offer a future-proof, unique solution for various requirements. reev's mission is to empower everyone to shape the future of eMobility, actively contribute to the mobility transformation, and to operate their own charging infrastructure. Therefore, the reev software is specifically designed to meet the needs of complex fleet situations, such as businesses, residential and commercial properties, or parking facilities.
