

reev Energy Management

eMS Pro by reev

Power distribution tailored to your needs

The intelligent reev energy management allows it to distribute the available power to be distributed over the existing charging points regarding their demand. The function avoids consumption peaks during the day and power is being used cost-efficiently.

Load management and cascading

Intelligent distribution over multiple charging points

The available power is being distributed to the charging points according to actual needs. This makes it possible to control over 100 charging points dynamically.

Dynamic measurement

Overload protection

Dynamic load management continuously measures consumption and distributes the available power to the charging points, taking into account the current building load. This ensures that the maximum location load is not exceeded at any time.

Prioritisation of charging points

Dynamic control makes it possible to prioritize specific charging points to ensure that the maximum power is always available.

Ordering and setup

Order

The installation engineer orders the controller from reev, specifying the parameters (number of charging points, etc.).

Preconfiguration

The controller is preconfigured by reev and shipped to the installation engineer.

Installation

The setup is done by the installation engineer, reev supports remotely.

Flexible integration of the reev Software

As an independent charging software expert, reev offers open source software that can be easily integrated into your charging infrastructure with a wide range of hardware manufacturers. Learn more at: reev.com/software

ABL reev ready for preconfigured ABL reev ready Hardware: ABL reev ready combines powerful and pre-configured ABL hardware with the intelligent reev Software. The software is quickly and easily activated with the reev ready license keys.

reev Connect for various hardware manufacturers: With the reev Connect Set, charging stations from various manufacturers can be easily and conveniently connected to the reev Dashboard.

You would like to order the reev Energy Management?

The reev team will be happy to assist you personally.
